The number of times a party has won the presidency.

Party

| Party	Number of times elected
War Union	1
Harding	1
Federalist	1
None	1
Whig	4
Democratic Republican	4
Democratic	15
Republican	20

(x-axis: 5, 10, 15, 20 — **Number of times elected**)

I found that using parties instead of individual presidents makes the graph smaller and easier to read as all the presidents except George Washington had a party. This was an example of similarity. I used the principle proximity to have the parties from lowest to most number of times elected so it is easier to read. Also, I showed the number of times the party has won in the box so it would easier to read and have a definite answer.
